

Geometry Drawing Project

You will be creating a picture using only the geometric shapes we have learned about. These shapes are all on the templates I have given you to use.

Your drawing must include

- 4 Rhombuses
- 4 Squares
- 4 Rectangles
- 4 Triangles
- 4 Parallelograms
- 4 Trapezoids
- 3 Hexagons

That is a total of 27.

You can use more of each of these if you would like but you **MUST** have at least the required shapes. You may not use circles as those are **NOT** polygons.

You must also pick a color for each shape. You will **NOT** be coloring these. A different student will be doing this part after you turn it in. On the corner of your page please let the person know what color each shape should be.

- Example
- Rhombus – Green
- Square – Yellow
- Rectangle – blue

Please choose colors that will be easy to find.

Grades
YOUR Project

27 required shapes = 10 points

Neatness (use your template) = 5 points

Telling what colors are needed = 5 points

I will give you another students project on Friday to color.

Neatness = 10 points

Did you use the required colors = 10 points

TOTAL = 40 points
